

David R. Kang, M.D.

HEAD & NECK SURGERY, COMPLEX RECONSTRUCTIVE SURGERY

Dr. David Kang is a double board-certified surgeon trained in maxillofacial surgery, head and neck oncology, and microvascular surgery. His practice is focused on the treatment of head and neck cancers involving the neck, face, and oral cavity. In addition, his practice of complex reconstructive surgery after cancer, trauma, and radiation injury has resulted in a large referral base throughout the southern United States.

Dr. Kang's reconstruction of the tongue, jaw, and face are unparalleled, with minimal incisions, excellent mobility, and aesthetic and functional outcomes. He has been using transoral robotic surgery (TORS) to reach tumors not easily accessible, and he has been perfecting the use of 3D technology for tumor modeling and rehearsing surgeries through virtual planning allowing for the most accurate surgeries possible today.

Family is Dr. Kang's priority, and he treats his patients in the same manner he hopes that his loved ones will be treated. As a result, Dr. Kang prides himself on his personal, patient-oriented approach. He understands that oncologic surgery may evoke feelings of anxiety, and he offers a concierge-style service to his patients so he can address questions or concerns himself. Dr. Kang stays up to date on current surgical methods and trends as a Fellow in numerous academies and by serving as a peer reviewer for medical journals.

EDUCATION

M.D., UT Southwestern Medical Center; D.D.S., Columbia University; M.S., Boston University; Residency, UT Southwestern Medical Center; Fellowship, University of Michigan
