

Collin County ENT

OTOLARYNGOLOGY

Collin County Ear Nose & Throat (CCENT) has provided quality, comprehensive otolaryngology care for Collin County patients since 1975. While the practice performs many common procedures, such as tonsillectomy and ear tube placement, the physicians also offer the latest minimally invasive techniques to treat sinus and allergy disease, snoring and sleep apnea, hearing loss, voice disorders, and tumors of the head and neck. All aspects of facial plastic surgery are offered, including rhinoplasty, facial rejuvenation, Mohs surgery reconstruction, facial fillers, and laser skin resurfacing. CCENT provides comprehensive allergy testing, allergy shots, and sublingual allergy drops, as well as hearing aid evaluation, dispensing, and troubleshooting. Many of these minimally invasive procedures and even more extensive sinus surgery can be performed conveniently and comfortably in the office, allowing patients to avoid general anesthesia in the hospital.

CCENT has partnered with Plano ISD and Frisco ISD to provide charity hearing and voice clinics. The practice routinely participates in clinical trials of cutting-edge treatments for diseases of the head and neck, and the physicians hold leadership positions at the hospitals where they work, as well as in national medical organizations. CCENT's three office locations allow convenience for patients in Collin, Dallas, and Denton counties.
